

Do you have a child between 7-12 years of age who has high functioning autism spectrum disorder?

---OR---

Do you have a child between 7-12 years of age who is typically developing and there is no family history of autism spectrum disorder?

The KATLAB is conducting a study on children with autism spectrum disorder and typically developing children. We are interested in measuring brain activity in children to learn more about the processes underlying facial recognition, emotional reactivity and regulation, and threat sensitivity. We are also interested in having one of their biological parents complete the same tasks. As part of the study, we will also ask you and your child to complete some surveys about feelings and behaviors. Your family will be paid for participation.

If interested in participating, please contact the KATLAB at 850-692-8110 *OR* email Dr. Alexandria Meyer (meyer@psy.fsu.edu) and Taylor Day (day@psy.fsu.edu).
